

WHAT DOES A FACTORY NEED?

Water power!

A river provides the power that makes the machines in the factory work

Fields and farms!

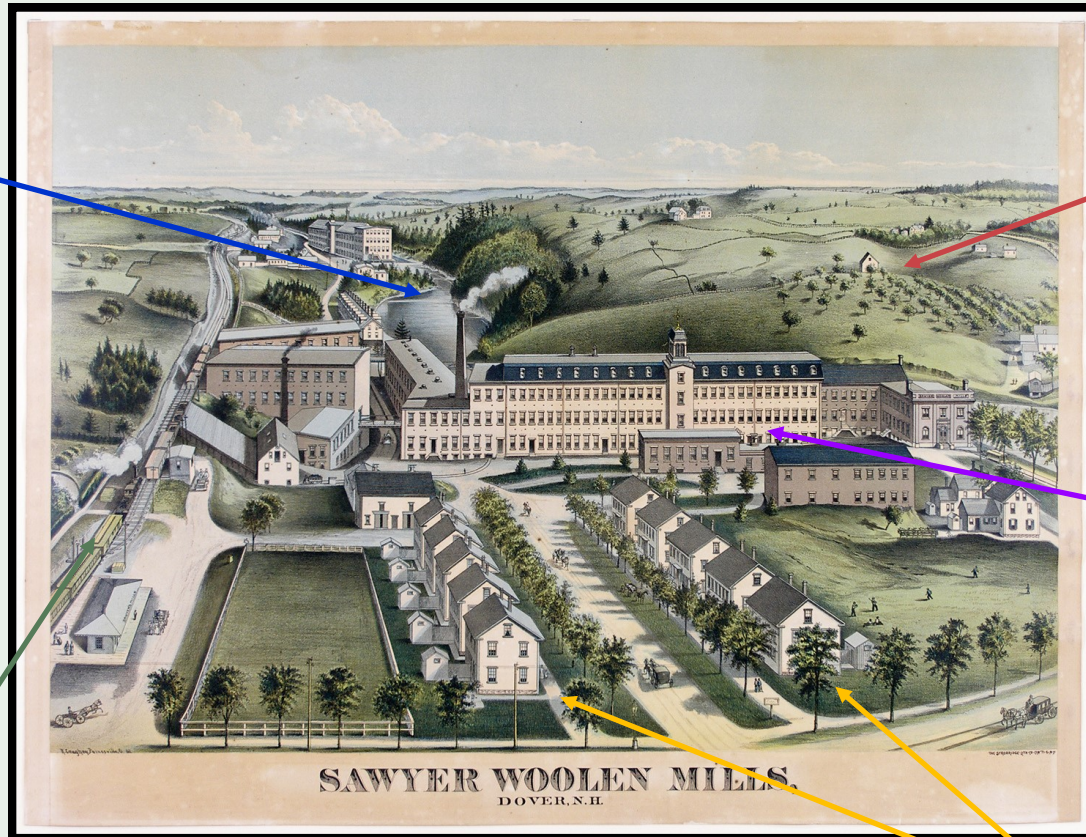

How New Hampshire looked before industrialization

The Factory!

Where finished goods (like cloth or shoes) are made from raw materials (like cotton, wool, or leather)

Workers' housing!

The workers need someplace to live close to the factory

Transportation! Railroads bring all sorts of things, like raw materials. Once the finished goods are made, railroads take them to other towns and cities where they are sold. Trains also bring food, clothing, and other products for the workers to buy.
